4AO Analog Output Module

for the MOSCAD RTU

FEATURES/BENEFITS

4-20 ma and 0-5 Vdc outputs. All outputs are protected

Dual Outputs per Channel

against surges and other disturbances.
Appropriate signal outputs are provided for virtually all system needs.

Each of the 4 independent output channels provides both

• Surge Withstand Capability (SWC) conformance is assured for the safety of the equipment and technicians.

Packaging

The module is packaged in a plastic housing that plugs and locks into the motherboard. Wire connections (up to 14 ga. wire) are made to removable connectors on the face of the module. No jumpers, calibration pots, etc. are located on the module (any calibration is done electronically via software from the ToolBox program.)

• Modularity allows the MOSCAD RTU to be easily expanded as system wants and needs change and makes field module replacement quick and easy.

The 4AO Analog Output module is an accessory to the MOSCAD RTU family that allows up to 4 other on-site pieces of equipment to be connected to, and controlled by, the RTU. Examples include variable speed motors, proportional gate valves, and chart recorders.

Data Output

Under the control of the defined Application Program, the CPU module will move the current data value of one or more logic variables from the CPU module into the 4AO module via the motherboard. The 4AO module will pass that data through on-module digital-to-analog converters (DAC), one converter for each output event, to the controlled device.

• The application in the CPU module determines the voltage or current output allowing the system to control valves, chart recorders, etc.

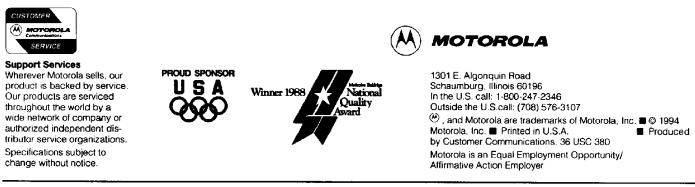

Specifications

Order	Plant Installed: Field Installed:	V118 FRN1489	
Resolution Overall Accuracy	12 bits (including sign) 0.1% of FS, 1 bit		
Output Load	<250Ω	when loop P.S. < 20 Vdc; $<750\Omega$ when loop P.S. > 20 Vdc	
Output Isolation Output Protection		rd DC/DC converter; Optical isolation st-transient surge and 2.5 kV oscillatory SWC per ANSI C37.90.1-1989	
Diagnostic	20 LEDs:	Separate voltage or current output in use, uncalibrated, and update; 1 each for Calibration Fail, Module Fail, and No Clock	
Power	5 Vdc: 12 Vdc:	20 ma 50 ma (90 ma when LEDs are on) plus output loop currents	
Environment	Humidity: Temperature:	0 to 90% @ +50°C -30 to +60°C	

Connections Chart

Typical Output Circuit

Гerm	Function	Term	Function
1	Vout1 (+)	11	Vout3 (+)
